Alexandria, Egypt

EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science, GPA: 4.00

Atlanta, USA

Expected 2028

Alexandria University

BSc in Electro-Mechanical Engineering

Alexandria, Egypt

2025

EXPERIENCE

Software Engineer

Vivionify

Jan. 2025 – Present

France (Remote)

- Built Kiro Travel from scratch, a ride-booking app live on Google Play covering taxi, airport, and ski transfers with Google Maps routing and Stripe, plus the staff app for dispatch, drivers, and billing.
- Built the internal driver app and its live trip tracking: GPS sampled by speed, pings buffered in on-device SQLite, batched uploads over Socket.IO with idempotency keys and backoff so pings survive signal loss and reconnect without duplicates.
- Designed and built a multi-tenant review service (Fastify, MongoDB) running in production for Kiro Travel and Ain Park, so review logic lives in one service instead of a copy per product; tenants authenticate by service key and resolve server-side.
- Lead up to 4 developers, setting the architecture they work in, scoping tasks and reviewing pull requests, and own deployment: Docker, Caddy, and GitHub Actions to staging and production.

PROJECTS

OMSCS Course Navigator | *React, TanStack Query, Zod, Vite, Express CS8903, advised by Dr. M. Konte*

- Rewriting the front end of a Georgia Tech tool that helps OMSCS students choose courses from review summaries and enrollment trends.
- Breaking several thousand lines of monolithic page components into feature modules with a repository layer and schema-validated query hooks; own the client logic alongside one developer on UI.

CaloBuddy | *NestJS, PostgreSQL, React Native, Next.js, AWS, Docker*

calobuddy.com | [App Store](#)

- Shipped an AI-assisted calorie-tracking app to the App Store solo, across backend, mobile, and web.
- Built the NestJS backend on Clean/Hexagonal architecture with CQRS and Gemini food parsing, deployed on AWS with Docker and GitHub Actions.

result_kit | *Dart*

pub.dev/packages/result_kit | [GitHub](#)

- Published an open-source Dart package for typed Result/Failure handling and async state machines, network-agnostic behind an adapter interface; used in the Kiro driver app.

Fundship | *NestJS, PostgreSQL, Flutter, AWS, Docker*

- Built a collaborative finance platform with multi-tenant, role-based workspaces and a budgeting engine on NestJS with CQRS and lint-enforced dependency boundaries, deployed on AWS.

TECHNICAL SKILLS

Languages: TypeScript, Dart, JavaScript, Python, Java, Swift, SQL, C/C++

Backend: NestJS, Fastify, Node.js, REST APIs, CQRS, Clean/Hexagonal Architecture, PostgreSQL, MongoDB, TypeORM, Socket.IO

Mobile & Frontend: Flutter, BLoC, React Native (Expo), Next.js, React, TanStack Query, SwiftUI

DevOps & Testing: Docker, AWS, Caddy, GitHub Actions CI/CD, Git, Firebase, Vitest, Playwright
