Alexandria, Egypt

Education

Georgia Institute of Technology — Atlanta, GA (Online)
Master of Science in Computer Science (OMSCS), GPA: 4.00 — *Expected 2028*

Alexandria University — Alexandria, Egypt
BSc in Electro-Mechanical Engineering — *2025*

Experience

Software Engineer — Jan. 2025 – Present
Vivionify — *France (Remote)*

- Built Kiro Travel from scratch and continue to develop it: a ride-booking app on Android and iOS for taxi, airport, and ski transfers with Google Maps and Stripe, plus the staff app for dispatch and billing.
- Lead up to 4 developers, setting the architecture they work in, scoping tasks and reviewing pull requests, and own deployment: Docker, Caddy, and GitHub Actions to staging and production.
- Built the internal driver app's live trip tracking: speed-based GPS sampling, pings buffered in on-device SQLite and batched over Socket.IO with idempotency keys, so none are lost or duplicated on signal loss.
- Designed and built a multi-tenant review service (Fastify, MongoDB) running in production for Kiro Travel and Ain Park, replacing a separate copy of review logic per product.
- Built a Next.js and PostgreSQL system end to end, in Arabic RTL, replacing a church service's spreadsheet for 1,000 members, with role-based access, attendance, and email reminders.

Projects

OMSCS Course Navigator | *React, Express, PostgreSQL* — *CS8903, advised by Dr. M. Konte*

- Rewriting the front end of a Georgia Tech tool that helps OMSCS students choose courses, splitting several thousand lines of monolithic pages into feature modules with schema-validated query hooks.
- Added a PostgreSQL database for a user feedback feature, and centralized course data and program rules from official OMSCS docs into one JSON schema on the Express backend.

CaloBuddy | *NestJS, PostgreSQL, React Native, Next.js, AWS, Docker* — calobuddy.com | App Store

- Shipped an AI-assisted calorie-tracking app to the App Store solo, across backend, mobile, and web.
- Built the NestJS backend on Clean/Hexagonal architecture with CQRS and Gemini food parsing, deployed on AWS with Docker and GitHub Actions.

Fundship | *NestJS, PostgreSQL, Flutter, AWS, Docker* — fundship.app | App Store

- Shipped a shared budget app for couples solo, with multi-tenant workspaces and passwordless sign-in.

result_kit | *Dart* — pub.dev/packages/result_kit | GitHub

- Published an open-source Dart package for typed Result/Failure handling and async state machines, network-agnostic behind an adapter interface; used in the Kiro driver app.

Technical Skills

Languages: TypeScript, Dart, Java, JavaScript, Python, Swift, SQL, C/C++
Backend: NestJS, Spring Boot, Fastify, CQRS, PostgreSQL, MongoDB, TypeORM, Socket.IO
Mobile & Frontend: Flutter, BLoC, React Native (Expo), Next.js, React, TanStack Query, SwiftUI
DevOps & Testing: Docker, AWS, Caddy, GitHub Actions CI/CD, Git, Firebase, Vitest, Playwright
